

Best Practice Safety Review 2018

How do you measure up?

You are invited to participate in Safety Action's 2018 safety performance benchmarking project.

RATE YOURSELF AGAINST OTHER BUSINESSES

Strong safety performance is commonly linked to more profitable businesses. But do you know if your performance is above or below average for Australia or your industry?

Your business is busy tracking various safety measure, but what do they mean?

- Are you an industry or Australian safety leader?
- Learn your businesses safety strengths and areas for improvement,
- Set realistic targets for safety improvement,
- Compare lead and lag indicators and learn the safety activities and initiatives that are linked to a better performance.

This year we have expanded the survey to cover Key Performance Initiatives, allowing us to link safety performance with safety related activities. Coupled with our historical trend data will allow us to provide targeted guidance to participants on areas to improve.

RESULTS

Only participants will receive a copy of the benchmarking report and be invited to attend our end of year forum on the results.

The report will include de-identified business' results summary, industry breakdowns, comparison of safety initiatives linked to a better safety performance, prosecutions summary by state and more.

PARTICIPATE NOW

Participate online by completing 20 YES/NO questions and provide data on 10 safety performance lead and lag indicators. Takes 5min to complete
